

When it comes to an effective relationship with customers and a dedication towards work, Turske Technologies is based on delivering the best quality with a home town feeling!

Turske Technologies is a family operated company founded by Rick and Linda Turske. With over 20 years experience it's no wonder they can do it all. Started in 1993, it was a part-time business which became a full-time venture in February of 2008.

Specialties include; computer sales support and service in XP, Networking, security, phone installation, virus detection and protection, and working with residential and commercial customers.

Turske Technologies offers a discounted, prepaid and scheduled monthly maintenance contract for our commercial customers.

Where Technology Meets Family

When it comes to fast and speedy service, Rick is there in a flash! Turske Technologies is very effective to their clientele. Instead of taking your computer to a Best Buy for the "Geek Squad" to fix it, Turske Technologies will come to your house or business and fix the problem in its own environment. Another strength of Turske Technologies is their competitive pricing structure. This flat cost helps out pace their competitors because there is no extra fees tagged onto the service invoice such as "after hours" and house calls.

Turske Technologies also offers their FREE consulting hour. Instead of just coming into your home, fixing your computer and leaving, Rick will stay and help you through the process of what is wrong and what is necessary to repair it. A real plus is that Rick will help by discussing the problem and repair in layman's terms, so you understand what is necessary to fix your computer!

Let Turske Technologies be the first company you think of for all your personal and commercial technology needs. We purchase, test and/or install complete computer systems and offer training, troubleshooting and technical support.
